

SAMUEL ADEYEMI

Summary

Full Stack Software Engineer with professional experience building and deploying web applications across fintech, healthcare, appointment scheduling, and workforce management environments. Proficient in Python, Django, Node.js, Express.js, TypeScript, React, PostgreSQL, MySQL, and MongoDB. Experienced in developing secure REST APIs, responsive frontend interfaces, authentication systems, payment integrations, database optimizations, third party integrations, and cloud deployments. Proven ability to improve application performance, support high volume transactional systems, and deliver complete product features in collaboration with product, design, data, and DevOps teams.

Recent Project

BetterBreaks is a productivity and wellness app that helps users plan and manage their breaks and daily activities. I worked as the Backend Engineer, building the APIs, handling authentication and database integration, and making sure the backend was secure, reliable, and scalable.

Education

■ Beng. Civil Engineering

Federal University Oye-Ekiti

2018 - 2024

Studied engineering principles, analytical problem solving, mathematics, and technical design, developing strong quantitative and structured problem solving skills applicable to software engineering.

■ NCE Mathematics and Physics

Kwara state collage of education

2015 - 2018

Developed strong foundations in mathematics, physics, logical reasoning, analytical thinking, and structured problem solving, while gaining experience in technical communication and education.

Experience

■ Software Developer | KophyTech

January 2026 - Present

- Develop and maintain frontend and backend features for appointment scheduling and workforce management platforms.
- Build secure RESTful APIs with Express.js and integrate backend services with frontend applications.
- Develop and maintain user facing application features and responsive interfaces while integrating backend APIs.
- Implement Role Based Access Control (RBAC) across multiple user roles.
- Develop booking workflows and affiliate tracking systems.
- Integrate third party services and webhook based automations into application workflows.
- Implement structured logging and monitoring solutions, reducing issue resolution time by approximately 35%.
- Collaborate with product and design teams to translate requirements into reliable, user focused features.

Skills

- **Languages:** Python, JavaScript (ES6+), TypeScript, SQL
- **Frontend:** React, TypeScript, HTML5, CSS3, Responsive Design, REST API Integration
- **Backend:** Django, Flask, Node.js, Express.js, RESTful APIs
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Auth & Security:** OAuth2, OpenID Connect, JWT, RBAC, Redis
- **Cloud & DevOps:** DigitalOcean, Render, Docker, GitHub Actions, Git, GitLab
- **Integrations:** Payment gateways, webhooks, Firebase Cloud Messaging (FCM)
- **Data & Analytics:** pandas, NumPy, scikit learn
- **Observability:** Structured logging and monitoring

Additional Strength

- **End to end feature development across frontend and backend**
- **Technical leadership and developer mentorship**
- **Cross functional collaboration with product, design, data science, and DevOps teams**
- **Technical documentation and knowledge transfer**
- **Application and database performance optimization**

■ Full Stack Engineer | Artifiation

Mar 2024 – Dec 2025 | Remote

- Built and maintained scalable healthcare applications using Django and modern frontend technologies.
- Developed RESTful APIs and integrated backend services with web interfaces.
- Implemented complete product features across backend services and frontend interfaces.
- Improved API response time by 30%, supporting significant growth in application usage.
- Optimized PostgreSQL and MySQL queries and database operations for systems handling more than 2 million monthly transactions.
- Collaborated with designers and stakeholders to deliver complete product features from requirements through implementation.
- Led and mentored four developers while maintaining code quality standards.
- Created technical documentation and trained product managers on system workflows.

■ Backend Developer | Fedus Technologies

Feb 2023 – Jan 2024 | Remote

- Designed and developed fintech applications supporting digital wallets, transfers, and bill payments.
- Built backend microservices and customer facing application features for financial products.
- Developed secure payment APIs processing more than 50,000 daily transactions.
- Implemented authentication systems using OAuth2 and JWT.
- Built and integrated customer-facing application functionality with backend services.
- Improved fraud detection processes through data-driven integrations.
- Reduced reporting latency by 35% through database optimization.
- Produced API documentation and onboarding materials for integration partners.

■ Backend / API Developer | Jevify

2023 | Contract

Designed and developed backend APIs for a music and podcast application. Built RESTful endpoints for user accounts, music, podcast, and content management. Implemented authentication and API access controls. Debugged integration issues and improved system reliability.

■ Software Developer | Monilola Photo Gallery and Studio

2020 – 2022 | Onsite

Developed and maintained software systems for a photography gallery and studio. Implemented improvements based on operational requirements. Troubleshoot issues and maintained application reliability. Managed system updates while ensuring business processes remained functional.
